

# South Transfer Station

Update — March 2010

*View of future South Transfer Station from S. Kenyon Street looking west.*

*Birds-eye view of future South Transfer Station looking northwest.*

Seattle Public Utilities (SPU) has recently hired a team to design build a new solid waste transfer station in South Park next to the existing South Recycling and Disposal Station. Site work is underway. The new station will maintain safety, capacity and reliability of transfer operations well into the future. Other benefits will include shorter wait times, safer operations and better lighting in the facility. Site and landscape improvements will create a new relationship to the South Park community. SPU has also committed to monthly street sweeping, weekly foot

litter patrols around the station and local job opportunities. The existing station will remain open while the new facility is being built, so there will be no change in service during construction.

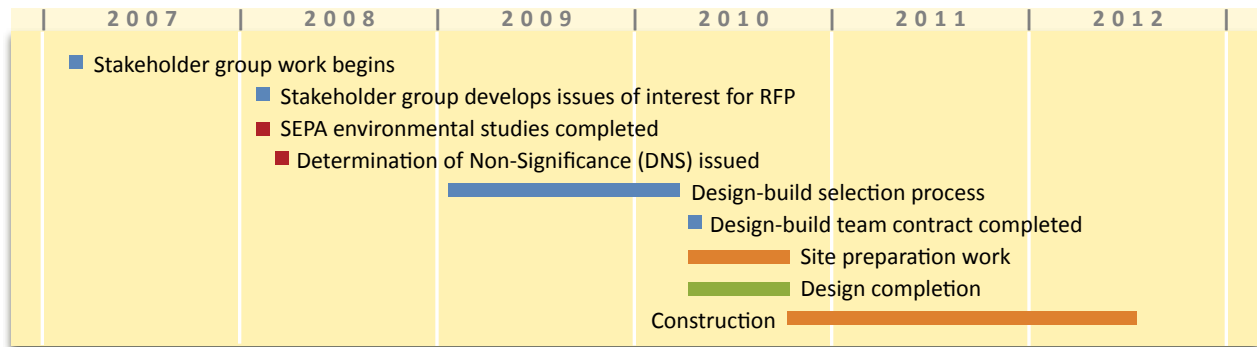

## Selection Process

On a design-build project, the team develops a design and cost for the facility during a competitive selection process. Teams responded to a detailed request for proposal which included issues of interest identified at public open houses and refined by a stakeholder group of station users and community members. Stakeholder committee members reviewed the submittals and provided recommendations to the selection panel.

## Contractor Selected

The City signed a contract with M.A. Mortenson Company on March 8, 2010 for the design and construction of the new station. Mortenson is teamed with URS Corporation, The Miller/Hull Partnership, Swift Company, Leo Kypuros, O'Brien & Company and Read Wagoner as a design-build project team. The team will complete the design between March and October of this year and will continue meeting with the stakeholder group and the public throughout the process. Construction will begin in October 2010 and be completed in the middle of 2012.
